Special, high covering of painted surface

High gloss; Additionally black and white also in matt finish

Intensity of colours

Short drying time: 20-30 mins

Touch dry: 60 min; Hardened: after 24 h

All the adjusts can be done up to 20 min

Water resistance is achieved after 5-6 days

Efficiency 1,5-2 m² depending type of surface by one application

Hard acrylic coating resistant to abrasion and mechanical damages

For indoor and outdoor use

Capacity 400 ml

Usage:

Before applying read carefully instructions on the container and use according to the manufacturer's recommendations.

Recommended substrate conditions:

Preparing the substrate is very important action influencing the quality and life of varnish coating. Fundamental principle, which relate to all surfaces prepared to painting is to grind, degrease and dry out. After drying the primed surface should be grinded with fine-grained sandpaper (e.g. P600).

How to use:

Apply product at temperature about 10-25°C (optimum temperature for good varnish drying). Drying time depends also on air humidity and product density. Painting should be made in well ventilated room. Prior to commencing painting, shake the container for about one minute, which will help mix the varnish by the ball found inside. Perform the test spray. Apply the varnish with few thin layers rather than one thick layer, from the distance of 25-30 centimeters. Following applying each layer, wait a few minutes. Following the completion, clean the nozzle. Put the container upside down, pressing the nozzle for the period of three seconds.
